

## CICASP Seminar in Science Communication: Summary & Outline

Wednesday 31<sup>st</sup> October, 2018

**Outline: CICASP Seminar #89**

### **Presentation Practice IV**

In this seminar, Haruhiko Iwaoki presented his study in a poster format, aimed for the Annual meeting of the Society for Neuroscience. In sequence, the audience provided feedback to improve his presentation, focusing on what points he could explain better, and how he could make his poster more attractive. At the end, Iwaoki had another chance to quickly present his poster through role-play with another student.

Wednesday 7<sup>th</sup> November, 2018

**Outline: CICASP Seminar #90**

### **Perspectives in Sci-Comm**

This week's seminar is an installment of "Perspectives in Sci-Comm". We will be joined by a visiting lecturer, Dr. Susumu Tomiya, who will provide an exploration through science communication using his own experiences with the subject. By attending, students will get a new perspective on how researchers might muddle through the world of science communication, with a number of insights that can help us all navigate this tricky topic as we grow as scientists and as educators.
