| It is really a valuable opportunity to participate the XXVII International Primatological Society (IPS) Congress in Nairobi Kenya. During my staying in Kenya, I made an oral presentation about modeling habitat suitability of Yunnan snub nosed monkey in Laojun Mountain National Park. I gained lots of comments and suggestions from the audiences for my future study. I actually benefited a lot from this congress. It provided me chances to expand and enrich my knowledge base not on within my current study section but also in various directions for potential future study. And I had the honor to communicate with the scholars of different generations in many face to face talks. Furthermore, as every zoological researcher ever dreamed, I joined the field observation in Africa. I went to Kenya National Park, and I saw the giraffes rambling in the bush wood, I saw the warthog vanishing in the vast savanna, I saw the antelope swiftly jumping across the traffic passage and I saw the solitary figure of rhinoceros against the remote prosperous city. This is the first time for me to contact with Masai people and witness the daily life of modern African soldiers. It made me to rethink profoundly about the life that I have after I talked with them and observed their lives. |
